Create Next-Generation User Experience for Requestors and Approvers with ID Management iBoT from Perpetuuiti's Plug-and-Play iBoT Store

Request. Approve. Provision. As easy as a Conversation...

Perpetuuiti™
Resilience Redefined...

What does the ID Management iBoT do?

The smart ID Management iBoT or IDM iBoT can perform various activities such are creating the user, updating/mapping the user, enabling the app user, disabling/deactivating/deleting the app user, etc. in an efficient manner.

The smart ID Management iBoT or IDM iBoT searches any ITSM application for the service requests raised for creation/updation/enablement or disablement of the app user. If the IDM iBoT finds any such ticket, it automates these service requests in the configured IDM application by using the information provided in the ticket and closes the service request. The iDM iBoT also sends a confirmation email to the user after closing the service request.

How is Perpetuuiti's IDM iBoT Unique in the Market?

The IDM iBoT from Perpetuuiti redefines the user experience by intelligently automating the ID management tasks thereby removing the inefficiencies arising due to the manual processes...

AI-powered BoT
